DETAILED ACTION***Continued Prosecution Application***

The request filed on 02-19-02 for a Continued Prosecution Application (CPA) under 37 CFR 1.53(d) based on parent Application No. 09/215,257 is acceptable and a CPA has been established. An action on the CPA follows.

Election/Restrictions

In the interview conducted 05-08-02, Applicant was notified that the amendments filed 01-08-02 (entered on 02-19-02 upon filing of a CPA request) resulted in claims drawn to more than one separate and distinct inventions. Applicant declined to elect an invention during this interview, and requested that a written restriction be mailed. Applicant further requested that claims drawn to *in vitro* methods, compositions and invertebrate methods be maintained as one group, rather than separated. In consideration of the prosecution history in the case, the Examiner agreed to examine claims drawn to said subject matter as one group.

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-11, 15, 16, 21, 22, 26-35 and 39, drawn to a method of inhibiting the expression of a target gene in a cell in vitro or in an invertebrate organism, classified in class 435, subclass 6.
- II. Claims 47-51, drawn to a method of inhibiting the expression of a target gene in a vertebrate organism, classified in class 514, subclass 44.

Art Unit: 1635

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are not disclosed as capable of use together and have different effects. The methods of Group I function to inhibit the expression of a target gene in a cell *in vitro*, which is different than the methods of group II, which function to inhibit the expression of a target gene in a vertebrate organism. The methods of Group I and Group II also involve materially different method steps, for example, the methods of Group I require the administration steps to be performed with a cell *in vitro* or an invertebrate organism, which is materially different than the methods of Group II, wherein the administration step is performed with a vertebrate organism.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
